About This Game

Welcome to Unsolved Stories which adorns the open world games with next-generation graphics. Chicago is an exciting and fascinating city with its absolute beauty, history, and great locations. The very first part, prepared for Unsolved Stories presents the whole glory of Chicago to you. New generation, highly detailed, stunning graphics engine will portray the magnificent atmosphere of the city. You can visit the most beautiful parts of the city. From the magnificent waterfront skyscrapers to the mess of the ghetto neighborhood. Freely explore the crowded and spectacular environment of the city besides its deserted and abandoned places. In each added new episode, you will find the story of a character and its gameplay. Unsolved Stories offers you an exciting and fascinating environment of the city in which you can use "First Person" view.

Please share your comments and suggestions with us about the game.

When this game first came out, I just could not make myself play it, as I found the faery annoying. Saw it on sale here on Steam, and thought, "Why Not?" Especially since I had played the first and third in this series.

The faery and the dragon didn't annoy me as much as I thought they would.

Despite what another reviewer wrote, you can click on them while they are speaking just to shut them up.

Especially when the dragon is repeating what someone just told you.

I actually did enjoy it, except for some of the HO's being difficult to find.

I like the fact that it has a jump map and you are notified when you are done in an area, so you can just move on.

It was at times challenging, but not overly so. Puzzles are solvable without being too simple.

If you're not sure what to do, there is a hint helper on top you can click on that will let you know what to do. Otherwise, it stays out of site, for those who do not want hints.

There is a WT on the Big Fish site for when you get really stuck.

Not sure what the CE would have, as seeing I played #3 I knew how the story would end.. If you're into building robots, or have ever been curious, this is probably the simulation for you.

I'll post a more detailed review once I've had time to delve into Logic Bots more.. taught me everything i need to know, i now have 17 girlfriends and 3 boyfriends. i love it. Visually top notch, unusual storyline, and intriguing setting. Biggest problem? The hint system is under-developed. If you're not going to give enough clues directly, you need to have at least a hint system robust enough to steer you to the right room without needing a recharge.

that said, I can definitely recommend this game despite that large flaw - the story is definitely different, the animation is well-done, and the HOG are incredibly well-detailed as well as authentic to the rough time period the game lingers in.. It's the same price as a Taco Bell burrito, and it's worth every penny.

Just because it still seems to be an issue with Negative Reviews.

Great Items but their use depends on your Play Style

In the First Bunker at that Very Beginning of the Game, The Items are in the Trunk.. This game is a total perversion of the InSANE franchise. The original was a pioneer of off-road demo-derby racing that gave the player a feature-rich depth of control like having to customize your suspension and gear ratios to suit the environment and type of competition your next game would be in, and the procedural damage that would sometimes smash your car into a twisted mess- but perhaps just not enough to prevent you from limping across the finish-line for the win. This is more like mario cart than InSANE. It's a cliché booster-gauge 'win points to buy upgrades' racer that has no business posing as a successor to InSANE. There isn't even a manual transmission option anymore. And, I could have missed it, but in the couple hours I've spent in the game so far, I didn't see a custom map utility- which was one of the coolest things about InSANE.

Even if not associated with the Codemasters masterpiece, this is not a very good racing game. It's half-racer, half-demolition derby, and not enough to be successful at either. Go play Hydro Thunder. It's basically the same darn thing but immensely better.. Someone thought I was chickening out, but I just needed to trading cards... Love this game! One of my favorite rogue-like games on Steam. Please continue updating this game!. If you enjoy procedurally-generated dungeons, then look no further. It may be bland and repetitious, but it's only three dollars and fun to play.

Hint: There is a musical cue that lets you know when enemies are sneaking up.. Fun and meh.. You bet I'm recommending this game, too.

10/10 great sequel love the protagonist. short but amazing game... good jokes... great memes.... recommended it to some of my friends.... now i got a few friends less. 11/10 would lose friends again. nice story. but i think its terrible game

[Server Maintenance] Tuesday, March 13th 2018, 21:00 EDT **UPDATED:**

Please be aware that we will be conducting a scheduled maintenance on Steam Knight Online Servers and service will be temporarily unavailable.

Maintenance time will be as follows:

Knight Online Server Time (EDT): 21:00

South America (PET): 20:00

Turkey : 4:00, March 14th

Duration: Approx. 2 hours, 30 minutes

We look forward to many more announcements, but for now we did want to set a clear expectation of what we have planned for May 1st.

True to the name - *mayday mayday* meaning *help! emergency!*, with our 1st debut we wanted to find the biggest thing the steam community on a whole could use help with and do that.

So here is what we plan to answer for this months mayday call to arms:

- Provide a rock solid experience of how to use source sdk on linux and then add vr to it.

Soon after that we will bore you with a Unity release of much of what you have probably already seen so we can have comparable offerings to other studios but we wanted to focus around supporting tools that are native linux and to steam and do what other studios aren't all doing.

[April 17 - Update]

Thus far we have source filmmaker working on an old Alienware Alpha i3, 8 gig ram (it plays the "heavy" scene in real time flawlessly) with SteamOS brewmaster beta using vulcan and proton wine! - *And if that doesn't sound alien i don't know what will.*

We will be writing a guide for getting up in going with this, then how to do a mod of our mayday content -> all on linux native (assuming we can end 2 end linux this. [in theory we can but now we have a deadline to deliver o my!])

So we wanted to lay clear expectations. Once this is done, we will call off our mayday alert and switch over to Unity 3d, do some guides for how to workshop with us and do unity on Linux native too - get those workshops-a-working too!

Stealth Achievement: (Impossible Long Range Shot [side mission])

We have in mind a directory structure using steam pipes/depots and packages to facilitate both of these (Unity and Source SDK) side by side like how the old SteamVR demo used to work where the secret shop was the only thing that was Unity but in a buggy way then (not buggy for us we hope) it was possible to switch from source to Unity and back again real slick stuff. We want to get this flushed out and polished for everyone so everyone can draw from all the strengths here on Steam.

Lastly, there are some open source licensed steam file format importers that work with Unity. If curious duckgo a search for "Hammer to Unity" this is the other part of it, plus SteamVR unity asset from 2017 already had most of steam materials wired up. We think valve wants us to do this, just haven't broken the cipher man.

So thats all for now, signing off. Enough radio chatter already geez, like only the 4 people reading this know what you mean. oops!. **Suggestions Forum Live:**

Hey guys DylaNemesis here,

we get messages all the time with people suggesting things that they think would look cool or add to the overall experience of the game.

So I decided to post this announcement to let you guys know we made a seperate forum in the steam page dedicated to the discussion of what features and content you would like to see.

Please feel free to hop over to the Suggestion tab and just tell us what you think and maybe even comment on some other user's suggestions saying how you think it could be improved

<http://steamcommunity.com/app/366580/discussions/3/>. **TTFa Development Update!:**

Hello there!

Today we're very excited to show you a cool little development video that we put together!

<https://www.youtube.com/watch?v=MKhErz39PPg>

It is simply... magnificent.
